

Butterfly Dice Addition Game

Instructions: Print on cardstock paper ... cut out and laminate. Make one set for each child playing. This can be done either in group or individual play. Each child lays their cards face up in front of them. The first child would shake the dice (two) and then add the numbers of the two dice together. For example if there was a 1 and 3 rolled the total would be 4. The child would find the card with the number 4 on it and turn it over. The next child would then roll the dice and play would continue until a player has all of his/her cards turned over. If a child rolls the same number as a card already turned over he/she would pass the dice to the next person.
